

Johnson County Commons Twin

Appliance proposal to Jeff Eden

A finished Johnson County Commons Twin, delivered as a single sealed appliance, handed to Jeff Eden to take forward commercially if he wants it.

From Dany Thériault, EVEglyphDesign (EgD) · To Jeff Eden · Prepared 2026-07-29

\$20,000

fixed, one time.

Appliance, mirror, spatial build, filter and surface included. No monthly, no seat count, no per-record fee.

WHAT IS IN THE BOX

- **Sealed appliance** — One compact inference/serving appliance, Strix Halo class — Ryzen AI 9 HX 470 tier, 32 GB, ~150 × 150 × 43 mm, under 120 W, runs 24/7 on hotel or office power, reachable over Tailscale. Not a workstation, not a rack. (32 GB class ~\$1,359 at the 2026-07-28 hardware review; 128 GB Strix Halo is \$3,000–3,300 on the memory shortage and is not needed for this workload.)
- **Held civic mirror** — A full local mirror of the ARK Midwest Watch civic holdings for Lenexa and Johnson County — the corrected baseline of 2,756,484 held records and 89 partial layers, held on disk, not linked. Person-level datasets are indexed as existing and never requested or mirrored.
- **One 3D spatial surface** — Every reachable dataset mapped into one 3D spatial surface of the county, so parcels, infrastructure, streets and places sit in the same coordinate space instead of in fourteen incompatible viewers.
- **Anonymised presence layer** — Existing civic, commercial and residential camera systems keep operating exactly as they do, with a filter added on top that emits counts and movement only. No identity, no faces, no live video feed — live all the same.
- **Citizen view** — Residents open a phone, see movement and traffic patterns in their zone, and can upload a photo which returns only how many people are there.
- **Sharing parity** — Every sharing function people already expect from Facebook, available natively — invite, share a place, go together.
- **No pre-cognitive loading** — No promotional feed before arrival. Nothing is marketed at the front. Once you are physically there — once you have already picked the restaurant — the surface adds what is good here, what to order, what not to miss. A layer on the experience, added where nobody is doing it, so no merchant and no resident has a complaint to make.
- **Payment at the point of experience** — Pay in place, less time at the till. Delivery cost of the payment path is effectively nil, so the proceeds route to a named local Johnson County charity rather than to a rake.
- **Concentric safety beacons** — Three zones, resident-set: a spoken safe word raises a beacon to other users, camera feeds inside the raised zone are digitally stamped, and a stamped feed is retrievable only on a specific subpoena. The evidence stays with the citizens and out of a central pool.

GOVERNING PRINCIPLES CARRIED INTO THE BOX

- **Safety first, betterment second.**
- **Conditions, never people.** Findings file against contracts, formats, fees and access arrangements — never against employees or residents.
- **Hold rather than merely link:** an upstream shutdown must not erase the evidence surface.
- **Front end, not replacement.** Google, Yelp, Nextdoor, OpenStreetMap and city feeds remain usable back ends.
- **No account, no exit cost.** Nothing is held hostage when a visitor leaves the geofence.
- **No aggregate signal auto-notifies** the Lenexa Police Department or any other authority.

COMMERCIAL TERMS

- **Price** — \$20,000, fixed, one time. Appliance, mirror, spatial build, filter and surface included. No monthly, no seat count, no per-record fee.
- **Hand-on** — Delivered ready to hand on. Jeff takes it forward commercially, or does not — his call.
- **Right of first refusal** — 14 days from the date of this document. After that the lane moves to the Vita route.
